

#### **Problem Set 4, Problem 0**

*Put your response to the reading below.*

**IMPORTANT:** *Your entire response should fit on this page.*

- 1. Kurzweil views technology as a fundamentally positive force in human development. Is his vision of the future one that you would look forward to? Why or why not?*
- 2. Kurzweil has a track record of remarkable inventions and successful predictions. Do you believe the predictions cited in this article? Why or why not?*

I don't think I look forward to how Kurzweil views technology. I think it is unavoidable that eventually, the computer will be smarter than humans. However, humans should have to lead ownership. The reason is that when computers dominate over human, only the human who can control (as knows how to use the computer properly) will be successful and those who do not know how to use them will be eventually drowned by computer and technology. They will lose their jobs, life, and resources to the computer. I also think it is too early to attempt what will be happened with the technology. Although technology is growing exponentially from previous and foundation such as old first phones, it will take a long time for the human to actually figure out how to improve skills for the needs of people. For now, the most universally AI is SIRI, so I think we still have some gap to arrive AI that read your emotion to thought.
